

LUCAS VACIS

QA AUTOMATION LEAD | QUALITY ENGINEERING | TEST ARCHITECTURE AUTOMATION STRATEGY | CI/CD | API QUALITY | AI-AUGMENTED ENGINEERING

Buenos Aires, Argentina | lucasvacis@gmail.com | +54 9 11 3195 1392 | linkedin.com/in/lucas-vacis

PROFESSIONAL SUMMARY

Quality Engineering leader with 8+ years building automation systems and owning release quality across web, APIs, and integrated services. Leads Cypress-to-Playwright migration, test architecture, parallel CI execution, and risk-based validation for distributed product teams. Combines hands-on TypeScript engineering with technical standards, mentoring, and cross-functional delivery. Uses AI-assisted workflows to accelerate implementation and diagnostics while validating changes through code review, automated tests, staging, and CI.

CORE CAPABILITIES

Primary stack: Playwright, Cypress, TypeScript, Jest, REST, GraphQL, Postman, GitHub Actions

Quality engineering: test architecture, reusable fixtures and page objects, API integration testing, parallel execution, CI/CD quality gates

Technical leadership: automation strategy, risk-based testing, release readiness, engineering standards, mentoring, cross-functional delivery

AI-enabled workflows: OpenAI Codex, GitHub Copilot, agentic QA workflows, custom guardrails, code review, CI diagnostics, evidence-driven reporting

PROFESSIONAL EXPERIENCE

Sr QA Automation Engineer | Forte Group | Client: NBC SportsEngine

08/2024 - Present | Remote | US client

- Lead the migration of critical end-to-end coverage from Cypress to Playwright with TypeScript, defining framework conventions, reusable fixtures, page objects, authentication and session patterns, test data, and CI execution standards.
- Design and direct Codex-assisted QA workflows for repository analysis, test implementation, code review, CI diagnostics, staging validation, and pull-request delivery; built reusable guardrails that enforce Playwright spec architecture.
- Led the design and validation of cross-repository API authentication-token caching with prewarming, worker hydration, concurrent-request deduplication, expiration handling, and focused Jest coverage to reduce repeated authentication load.
- Architect parallel CI execution and quality gates across pull requests, preview environments, and staging to improve feedback reliability for release validation.
- Validate REST and GraphQL services, triage failures, assess technical risk, and provide evidence-based release recommendations with engineering and product stakeholders.

Sr QA Automation Engineer | Distillery | Client: Scorpion

02/2022 - 08/2024 | Remote | US client

- Designed and maintained Cypress, Cucumber, and TypeScript automation suites for critical UI workflows and regression coverage.
- Validated front-end, back-end, and GraphQL behavior across queries and mutations, strengthening coverage across product layers.
- Integrated automated checks into CI/CD and partnered with developers and product owners on planning, defect analysis, and release readiness.

PROFESSIONAL EXPERIENCE

Sr QA Engineer | CocoPago

06/2021 - 02/2022 | Remote | US company

- Planned and executed risk-based testing across web and mobile applications, covering functional, backend, cross-browser, and release validation.
- Automated regression scenarios with Selenium and Java, validated APIs with Postman, and tested iOS and Android builds.

Sr QA Automation Engineer | GlobalLogic | Client: Claro

12/2020 - 06/2021 | Argentina

- Built Selenium, Java, TestNG, and Page Object Model automation for core web workflows.
- Migrated manual regression scenarios into maintainable automation and validated REST services through response and log analysis.

QA Automation Engineer | Cognizant Softvision | Client: Schneider Electric

07/2020 - 12/2020 | Argentina

- Automated web and backend validation using .NET, Selenium, NUnit, Postman, and Azure DevOps.
- Maintained test suites, execution plans, and sprint-level coverage for integrated applications.

QA Analyst | Rappi

05/2019 - 07/2020 | Argentina

- Validated business-critical integrations through functional and REST API testing.
- Migrated manual cases into Katalon Studio and trained QA team members on automation use and troubleshooting.

QA Analyst | MRM//McCann

09/2017 - 05/2019 | Argentina

- Executed functional, regression, smoke, and integration testing for web releases.
- Collaborated with US-based teams to clarify requirements and align release-quality expectations.

PROFESSIONAL DEVELOPMENT

AI Engineering | Henry | *In progress* | Jul 2026 - Sep 2026

Claude Code in Action | Anthropic Academy | *Completed* 2026

Cypress with TypeScript | Test Automation University

EDUCATION

Information Technology studies | Escuela Argentina de Negocios | 2019 - 2021 | *Degree incomplete*

LANGUAGES

Spanish: Native | **English:** C1 Advanced / Professional working proficiency
